- **6.300.000 Km in meno ogni anno;**
- **1.000 tonnellate di CO² non immesse in atmosfera** (occorrerebbero 25.000 alberi su una superficie pari a 28 campi da calcio, per compensare l'immissione di CO² nell'ambiente).
- Nel 2019 inoltre è stato installato il più recente post-combustore che elimina completamente le sostanze organiche (SOV) fonte delle emissioni odorogene altrimenti emesse in atmosfera.

• *We reduced by **49%** the distances involved in transporting raw materials thanks to our intensive recycling of waste:*

- **1.000 tonnes of CO² not released into the atmosphere** (it would take 25.000 trees over an area of 28 football fields, to compensate for the release of CO² into the environment).
- *Furthermore, in 2019 the most recent post-combustor was installed. It contributes in eliminating organic substances (SOV), that are the source of odorous emissions and that would be otherwise emitted in the atmosphere.*

ACQUA

Water

Importanti investimenti in impianti di depurazione e corsi di formazione indirizzati alle risorse umane, hanno ridotto i consumi idrici del **62%** rispetto alla media del settore:

- **10.000 m³ di acqua in meno ogni anno** (pari al consumo di 50 famiglie).

BRICK GRES GENERATION

“ Ceramica Rondine ha lanciato per prima sul mercato il gres porcellanato effetto mattone. Brick Generation, è una perfetta sintesi di contemporaneità e fascino atemporale. Parliamo infatti di un rivestimento che riproduce con impressionante fedeltà la superficie e la resa tattile del mattone. La sua ruvidità, un'intensità materica senza precedenti, viene proposta e declinata in un'ampia tavolozza cromatica che fa rivivere l'affascinante essenza del mattoncino. Affidarsi alla personalizzazione degli spazi in ottica brick ci consente poi di giocare con pochi e semplici oggetti per mettere a punto un look 100% urban. ”

Ceramica Rondine has developed a new collection: Brick Generation, a perfect blend of contemporary style and timeless appeal. We're looking at a wall covering able to offer an impressively accurate reproduction of the surface and the feel of brick. The rough texture, of an unprecedented material intensity, comes in a wide variety of shades brings the marvellous essence of brick right back to life. This focus on bringing a personal touch to settings with a brickwork twist allows us to experiment with a few simple objects to create a 100% urban look.

Ceramica Rondine propose une nouvelle collection qui s'appelle Brick Generation et qui est une synthèse parfaite entre contemporanéité et charme atemporel. Nous parlons en effet d'un revêtement qui reproduit, avec une fidélité impressionnante, la surface et le résultat tactile de la brique. Sa rugosité, une intensité matiériste sans précédents, est proposée et déclinée dans une vaste palette chromatique qui fait revivre la fascinante essence de la brique. S'en remettre à la personnalisation des espaces dans une optique de 'briques' nous permet aussi de jouer avec quelques objets simples afin d'élaborer un look 100% urbain.

Ceramica Rondine hat eine neue Kollektion entwickelt: sie heißt Brick Generation und ist eine perfekte Verbindung aus Zeitgemäßheit und zeitloser Faszination. So sprechen wir von einer Verkleidung, die die Oberfläche und die Beschaffenheit von Ziegel bei der Berührung mit erstaunlicher Wirklichkeitstreue nachahmt. Ihre Rauheit, eine beispiellose intensive Beschaffenheit, wird in einer breiten Farbpalette angeboten und ausgearbeitet das faszinierende Wesen des Ziegelsteins nacherleben lässt. Indem wir uns der persönlichen Gestaltung der Räume mit der Brick-Optik anvertrauen, erhalten wir die Möglichkeit, danach mit einigen wenigen einfachen Gegenständen zu spielen, um einen 100%-Urban-Look zu perfektionieren.

“ Il rivestimento 3D riporta sul gres porcellanato cubi di pietra o assi di legno su più livelli, capaci di creare diverse impressioni di profondità e ritmare le pareti con un piacevole effetto tridimensionale. Frutto della sofisticata tecnologia “tile detector”, che permette di fotografare e comunicare alla macchina digitale l’esatta scansione grafica che si desidera riprodurre, il rivestimento 3D vanta una sorprendente fedeltà mimetica e una resa materica tattile e d’impatto. Suggestiva per la zona living, originale per gli ambienti bagno e il giusto mix tra ricercatezza e innovazione per spazi pubblici quali spa o esercizi commerciali: il rivestimento 3D si adatta in modo versatile ad ogni stile, necessità e destinazione d’uso anche in esterno, grazie alle caratteristiche tecniche superiori del gres porcellanato.

”

The 3D wall covering features different levels of stone cubes or wooden planks on porcelain stoneware, creating different impressions of depth and re-create the walls with a pleasant three-dimensional effect. The result of the sophisticated “tile detector” technology, which allows photographing and communicating the exact graphic scan to be reproduced to the digital printer, the 3D wall covering boasts an amazing camouflage fidelity and a tactile and impact material yield. Suggestive for the living area, original for the bathroom and the right mix of sophistication and innovation for public spaces such as spas or shops: the 3D wall covering adapts in a versatile way to any style, need and intended use even outdoors, thanks to the superior technical characteristics of porcelain stoneware.

Le revêtement de mur 3D comporte différents niveaux de cubes de pierre ou de planches de bois sur le grès de porcelaine, créant différentes impressions de profondeur et recréant les murs avec un effet tridimensionnel agréable. Le résultat de la technologie sophistiquée de «détecteur de carreaux», qui permet de photographier et de communiquer le scan graphique exact à reproduire à l’imprimante numérique, le revêtement mural 3D offre une incroyable fidélité de camouflage et un rendement tactile et matériel. Suggestif pour le salon, original pour la salle de bain et le bon mélange de sophistication et d’innovation pour les espaces publics tels que les spas ou les magasins: le revêtement mural 3D s’adapte de manière polyvalente à tout style, besoin et utilisation, même à l’extérieur, grâce aux caractéristiques techniques supérieures du grès cérame.

Die 3D-Wandverkleidung weist auf das Feinsteinzeug verschiedene Ebenen von Steinwürfeln oder Holzbretter, die unterschiedliche Tiefeneindrücke erzeugen auf und die Wände mit einem angenehmen dreidimensionalen Effekt nachbilden. Das Ergebnis der hochentwickelten “tile-dektor” -Technologie, die es ermöglicht, den genauen grafischen Scan auf dem digitalen Drucker zu reproduzieren, zeichnet sich durch eine erstaunliche Tarnungstreue und einen taktilen und schlagzähen Materialertrag aus. Suggestiv für den Wohnbereich, originell für das Badezimmer und die richtige Mischung aus Raffinesse und Innovation für öffentliche Bereiche wie Wellness oder Shops: die 3D – Verblender passen sich dank der hervorragenden technische Eigenschaften von Feinsteinzeug jedem Stil, Bedarf und Verwendungszweck auch im Freien an.

“ Essenzialità di stile, linearità degli elementi per valorizzare l'architettura più attuale. Cotti, Cementi e Metalli trovano nuova vita nelle collezioni di Rondine, per vestire la dimensione abitativa di una moderna eleganza che si addice alle tendenze contemporanee dell'interior design.

”

Essential style, linear elements to make the most of today's architecture. New life comes to cotto tiles, cements and metals in the Rondine collections, dressing any home with the modern elegance demanded by the contemporary trends of interior design.

Essentialité de style, linéarité des éléments pour valoriser l'architecture la plus actuelle. Les Cotto, ciments et métaux trouvent une vie nouvelle au sein des collections de Rondine afin de revêtir la dimension d'habitation d'une élégance moderne qui cadre avec les tendances contemporaines du design d'intérieur.

Hochmoderne Architektur durch essentiellen Stil und Linearität der Elemente. Cotto, Zement und Metall stellen in den Kollektionen Rondine eine neue Art der Wohngestaltung vor, die mit moderner Eleganz die kontemporäre Tendenz des "Interior Design" zum Ausdruck bringt.

Data la struttura irregolare dei bordi della tavola, che richiama la manifattura artigianale del classico cotto fiorentino, per esaltare le qualità estetiche del prodotto, si consiglia una fuga minima di 4 mm.

Given the irregular structure of the edges of the tile, which recalls the traditional craftsmanship of the Florentine "Cotto", to enhance its aesthetic qualities, we recommend a minimum joint of 4 mm.

Il termine del ciclo di vita del prodotto si ha con la demolizione delle piastrellature. I detriti provenienti dalla demolizione delle piastrellature sono rottami di materiali ceramici, dunque di materiali inerti (non reattivi, chimicamente e fisicamente stabili, resistenti ad esposizione prolungata anche a condizioni estreme dal punto di vista termico, idrometrico e chimico).
I detriti di demolizione di piastrellature possono essere collocati nell'ambiente senza rischi particolari, ed anche trovare impiego nella preparazione di sottofondi, etc.

The end of the life cycle of the product comes with the demolition of the tiling. Debris from the tiling demolition are scraps of ceramic tiles, therefore inert materials (non-reactive, chemically and physically stable, resistant to even prolonged exposure to extreme thermal, chemical and hydrometric conditions).
Debris from the demolition of ceramic tiles can be placed safely in the environment, and also can be used in the preparation of substrates, etc.

La fin du cycle de vie du produit est représenté par la démolition du carrelage. Les débris provenant de cette démolition sont des matériaux céramiques, donc des matériaux inertes (non réactifs, chimiquement et physiquement stables, résistants aux expositions prolongées, même à des conditions thermiques, hydrométriques et chimiques extrêmes).
Les débris de démolition en mosaïque peuvent être placés dans l'environnement sans risques particuliers et ils peuvent également être utilisés dans la préparation de sous-couches, etc.

Das Ende des Produktlebenszyklus ist der Abbruch der Fliesen. Die Bruchstücke von dem Abbruch der Fliesen sind Abfälle von Keramikmaterialien, also von inerten Materialien (nicht reaktiv, chemisch und physikalisch stabil, widerstandsfähig auch gegen längeres Belichtung unter extremen thermischen Bedingungen).
Die Abbruchreste können ohne besondere Risiken in die Umwelt verbracht und auch zur Vorbereitung von Substraten usw. verwendet werden.

CONSIGLI DI POSA E PULIZIA PER IL PRODOTTO CERAMICO DI CERAMICA RONDINE

Premessa

La norma UNI EN 14411 - “Piastrelle di ceramica - definizione, classificazione, caratteristiche e marcatura” - si propone di definire e fornire i termini, i requisiti ed i criteri di contrassegno per le piastrelle di ceramica di Prima scelta. Italcer S.p.A. sulle proprie piastrelle esegue costantemente tutti i test previsti dalla norma succitata, avvalendosi di laboratori accreditati. Vengono, inoltre, attuate costantemente procedure interne per il controllo della qualità del prodotto.

Posa

Il posatore sul cantiere prima della posa deve verificare il tono, il calibro, la scelta del materiale, mentre durante la posa deve prelevare sempre il materiale attingendo da più scatole per ottenere un mix cromatico ideale. Deve, altresì, verificare la congruità del prodotto anche per eventuali difetti già evidenti prima della posa, per i quali sono escluse le garanzie qualora la segnalazione avvenisse dopo la posa.

Il posatore deve utilizzare i collanti idonei per le varie destinazioni d’uso e seguire le indicazioni del produttore riportate sulle confezioni. Deve verificare attentamente che il sottofondo sia stabile, asciutto e maturo, non gelato e non eccessivamente caldo. Deve effettuare la spalmatura del collante a regola d’arte affinché non si creino vuoti tra piastrella e sottofondo.

Il posatore, in modo particolare per i prodotti con superfici levigate, satinate o lappate, deve stare attento a non segnare il materiale sulla superficie di utilizzo con matite (grafite) o pennarelli indelebili. Per realizzare i tagli e le sagomature richieste dalla Direzione dei Lavori, deve utilizzare appositi dischi diamantati e attrezzature specifiche, in particolar modo per il gres porcellanato. La dimensione della fuga tra le piastrelle può variare in funzione del formato che si utilizza, dell’angolazione della posa in ortogonale o in diagonale, e della destinazione d’uso. Si consiglia una fuga minima di 3 mm per i prodotti non rettificati e una fuga minima di 2 mm per i prodotti rettificati. La posa a correre dei formati rettangolari impone di sfalsare la piastrella di 6 cm e, comunque, mai più di 10 cm (Fig.1).

Negli ambienti di grande dimensione è necessario posizionare dei giunti di dilatazione con regolarità, mentre, per i piccoli ambienti è sufficiente lasciare un leggero stacco fra piastrellato e muri perimetrali, coperto poi dal battiscopa.

Stuccatura e pulizia dopo posa

L’utilizzo di malte o riempitivi colorati con pigmenti deve essere fatto dopo aver eseguito una prova preliminare.

Per le superfici levigate, satinate o lappate del gres porcellanato, a causa della microporosità provocata dall’azione abrasiva delle mole durante il processo di lavorazione, non si possono usare malte o riempitivi colorati a contrasto (piastrelle bianche e stuccatura antracite, rossa...).

Con l’utilizzo di stucchi cementizi dopo la stuccatura delle piastrelle, a stucco ancora fresco, è necessario rimuovere immediatamente, in modo accurato con spugna e abbondante acqua lo stucco in eccesso. Alcuni giorni dopo la posa, eseguire la pulizia di fondo mediante l’utilizzo di acidi tamponati al fine di sciogliere ed asportare completamente tutti i residui di cantiere.

Altrettanto importante è risciacquare bene fin quando l’acqua di lavaggio risulti essere limpida. Utile è l’utilizzo di aspiratori per liquidi, con lo scopo di rimuovere l’acqua sporca di lavaggio, evitando di spostarla da una parte all’altra. Anche a fine cantiere il posatore deve lavare i pavimenti con soluzioni di acqua e acido tamponato per evitare che la rimozione inadeguata o tardiva dei residui della stuccatura utilizzata per le fughe, lasci aloni difficili da rimuovere.

Per questa operazione Rondine propone Deterdek di FILA (attenersi rigorosamente alle percentuali di diluizione consigliate sul flacone), disincrostante acido che non sviluppa fumi nocivi e unisce all’azione disincrostante anche un’efficace azione pulente. Per particolari campi di applicazione, qualora si desideri ottenere una stuccatura impermeabile è possibile procedere con l’utilizzo di una malta epossidica. Seguire le precise indicazioni del produttore riportate sulle confezioni e attenersi rigorosamente alle modalità d’uso. Per l’impiego di tali prodotti, rivolgersi sempre a posatori esperti con alta professionalità poiché, la non corretta applicazione di stucchi epossidici, comprometterebbe in modo irreparabile l’aspetto estetico e cromatico delle piastrelle. Di recente FILA ha introdotto un innovativo pulitore per residui epossidici: FILACR10.

L’utilizzo di prodotti detergenti (tipo antiruggine) che spesso contengono acido fluoridrico danneggerebbe definitivamente la superficie di qualsiasi tipo di piastrella.

E’bene sapere, inoltre, che oltre il 90% delle contestazioni in cantiere è dovuto a un cattivo, o addirittura inesistente, lavaggio dopo posa. Con un corretto lavaggio dopo posa si eliminano i residui di posa (malta, colla, vernice, sporco da cantiere di varia natura) e si rimuovono eventuali residui superficiali di sporco.

Manutenzione ordinaria

Per i pavimenti con superficie levigata consigliamo di effettuare la pulizia giornaliera con il detergente neutro Fila Cleaner (attenersi rigorosamente alle percentuali di diluizione consigliate sul flacone) e di effettuare periodici trattamenti impregnanti antimacchia al fine di proteggerli da eventuali danni provocati da pennarelli, inchiostro, ruggine o altri prodotti ad altissima penetrabilità. Per quanto riguarda la manutenzione ordinaria delle nostre piastrelle, suggeriamo l’utilizzo dei prodotti di FILA. Per conoscerli consultare il sito www.filachim.com.

LAYING AND CLEANING RECOMMENDATIONS FOR CERAMICA RONDINE CERAMIC PRODUCTS

Introduction

Standard UNI EN 14411 – Ceramic tiles: Definition, Classification, Characteristics and Marking, defines and provides the marking terms, requirements and criteria for high quality ceramic tiles. Italcer S.p.A. continually tests all its tiles in accredited workshops, in accordance with the aforementioned standard. Moreover, internal quality control procedures are implemented on an ongoing basis.

Laying

Before laying at the site, the tiler should check the shade, size, and choice of material, whereas when laying the tiler should always use tiles from several boxes to obtain the ideal colour mix. The tiler should also check the product for any obvious flaws before laying, which would not be covered by the guarantee if pointed out after laying.

The tiler should use adhesives which are suitable for the various types of use, and follow the instructions on the packaging. The surface to be tiled should be checked to ensure it is stable, dry and ready for tiling, and is not excessively hot or cold. The adhesive should be applied professionally such that there are no gaps between the tile and the surface.

The tiler should be careful not to mark the material on the outer surface with pencils (graphite) or permanent markers, especially on products with smooth, glazed or lapped surfaces. Appropriate diamond tile cutters and special equipment should be used for the cutting and outlining operations requested by the Works Manager, especially with porcelain stoneware. The dimension of the tile joint may vary depending on the format used, orthogonal or diagonal laying angles, and final use. A minimum tile joint of 3 mm is recommended for non-rectified products and a minimum joint of 2 mm for rectified products. Laying rectangular formats in a staggered pattern requires tiles to be staggered by 6 cm, but never more than 10 cm. (Fig.1). In large rooms expansion joints must be positioned with regularity, whereas in small rooms it is sufficient to leave a slight gap between the tiles and perimeter walls, which are then covered with skirting.

Grouting and cleaning after laying

Fillers or mortar coloured with pigments should only be used after carrying out an initial test. For porcelain stoneware surfaces which are smooth, glazed or lapped, mortar or fillers which are contrast coloured (white tiles and anthracyte, red grouting etc.) cannot be used due to the microporosity caused by the abrasive action of the cutter during processing.

With the use of cement surfacers after grouting the tiles, with the grout still fresh, any excess grout should be removed immediately with a sponge and plenty water.

A few days after laying, clean thoroughly with buffered acids to completely remove and dissolve any residue. It is also important to rinse well until the wash water runs clean. Liquid extractors

are useful for removing dirty wash water, which avoids moving it from one place to another. When work has been completed the tiler should wash the floors with a water and buffered acid solution, to avoid the insufficient or late removal of grout residue leaving marks which may be difficult to remove.

Rondine recommends FILA Deterdek for this operation (follow the recommendations on the container for dilution percentages closely), which is an acid descaling agent that does not give off harmful fumes and combines the descaling action with effective cleaning.

For special areas of application, if waterproof grouting is required, epoxy mortar can be used. Follow the manufacturer’s instructions on the packaging exactly and adhere to the procedures for use. When using these products, always consult expert, qualified tilers, as the incorrect application of epoxy mortars could irreversibly compromise the colour and appearance of the tiles.

The use of detergents (anti-corrosive products) which contain hydrofluoric acid could permanently damage the surface of any type of tile. It should be noted that more than 90% of the problems which arise on site are due to incorrect, or even non-existent, washing after laying. Appropriate washing after laying removes laying residue (mortar, adhesive, various types of dirt from the work site) and any remaining surface dirt.

Standard maintenance

For floors with smooth surfaces we recommend cleaning daily with Fila Cleaner (adhere to the recommended dilution percentages on the container), and treat regularly with an anti-stain treatment to protect the tiles from damage caused by markers, ink, rust or other damaging products. We recommend the use of FILA products for the standard maintenance of Rondine tiles. CONSEILS DE POSE ET DE NETTOYAGE POUR LES PRODUITS CÉRAMIQUES DE CERAMICA RONDINE

Préambule

La norme UNI EN 14411 - « Carreaux de céramique - définition, classification, caractéristiques et marquages » – entend définir et fournir les termes, les standards et les critères spécifiques aux carreaux de céramique de Premier choix.

Sur les carreaux qu'elle produit, la société Italcer S.p.A. effectue systématiquement tous les tests prévus par la norme susmentionnée, en faisant appel à cet effet à des laboratoires accrédités. Par ailleurs, sont constamment mises en oeuvre des procédures internes pour le contrôle de la qualité du produit.

Pose

Sur le chantier, avant la pose, le poseur doit contrôler la teinte, le calibre, le choix du matériau et durant la pose, il doit toujours prélever les carreaux dans plusieurs boîtes à la fois pour obtenir un mix chromatique idéal. Il doit par ailleurs s’assurer de la conformité du produit, entre autres au regard d’éventuels défauts visibles avant la pose, pour lesquels toute garantie est exclue dans le cas où la réclamation serait présentée après la pose.

Le poseur doit utiliser les colles appropriées en fonction du type d’utilisation prévu et doit suivre les recommandations du fabricant indiquées sur les emballages. Il doit effectuer un soigneux contrôle pour s’assurer que le support est stable et sec, non gelé et non excessivement chaud. Il doit étaler la colle dans les règles de l’art de façon à éviter la formation de vides entre le carreau et le support. En particulier pour les produits polis, satinés et adoucis, le poseur doit veiller à ne pas marquer le matériau sur la surface supérieure avec un crayon de papier (graphite) ou des feutres indélébiles. Pour réaliser les coupes et les profilages requis par la Direction des travaux, il doit utiliser des disques diamantés et des équipements spécifiques, en particulier pour le grès cérame. La largeur des joints entre les carreaux peut varier en fonction du format utilisé, de l’angle de pose (orthogonal ou diagonal) et de l’utilisation prévue. Il est recommandé de réaliser un joint d’au moins 3 mm pour les produits non rectifiés et d’au moins 2 mm pour les produits rectifiés. La pose à fond perdu des formats rectangulaires impose que les carreaux soient décalés d’au moins 6 cm et en aucun cas de plus de 10 cm (Fig. 1).

Dans les espaces de grandes dimensions, il est nécessaire de positionner des joints de dilatation avec régularité, alors que pour les espaces de petites dimensions, il suffit de maintenir un léger espace entre la surface carrelée et les murs de pourtour, qui sera ensuite recouvert par la plinthe.

Jointoiment et nettoyage après pose

L’utilisation de mortiers ou de produits de jointoiment colorés à l’aide de pigments doit s’effectuer à l’issue d’un essai préliminaire.

Pour les surfaces polies, satinées ou adoucies en grès cérame, en raison de la microporositè créée par l’action abrasive des meules durant le processus appliqué à la surface, il n’est pas possible d’utiliser des mortiers ni des produits de jointoiment colorés en contraste (carreau blanc et joint anthracite, rouge, etc.).

En cas d’utilisation de produits à base de ciment, après le jointoiment des carreaux, alors que le produit à joint est encore frais, il est nécessaire de retirer immédiatement et soigneusement, à l’aide d’une éponge et de beaucoup d’eau, l’excès de produit de jointoiment. Quelques jours après la pose, nettoyer à fond la surface en utilisant des acides tamponnés afin de dissoudre et d’éliminer totalement les résidus de chantier.

Il est tout aussi important de bien rincer jusqu’à ce que l’eau de lavage soit limpide. Il est utile d’utiliser un aspirateur à liquides pour éliminer l’eau sale de lavage, en évitant de la déplacer d’une partie à l’autre.

En fin de chantier également, le poseur doit laver les sols à l’aide d’une solution d’eau et d’acide tamponné pour éviter que la mauvaise élimination ou l’élimination tardive des résidus de produits de jointoiment ne laisse des auréoles dont il est ensuite difficile de venir à bout.

Pour cette opération, Rondine propose Deterdek de FILA (en veillant à respecter scrupuleusement les pourcentages de dilution recommandés sur le flacon), il s’agit d’un désincrustant acide qui ne dégage pas de fumées nocives et qui allie une action désincrustante à une action efficace de nettoyage. Pour certains champs d’application particuliers, dans le cas où l’on souhaiterait obtenir un jointoiment imperméable, il est possible de procéder à l’application d’un mortier époxy. Suivre les indications précises du fabricant figurant sur les emballages et veiller à respecter scrupuleusement les modalités d’utilisation. Pour l’utilisation de ces produits, veiller à toujours s’adresser à des poseurs hautement qualifiés dans la mesure où la mauvaise application de produits de jointoiment époxy peut compromettre l’aspect esthétique et chromatique des wcarreaux.

L’utilisation de produits détergents (de type antirouille) qui contiennent souvent de l’acide fluorhydrique a pour effet d’endommager définitivement la surface de tout type de carreau. Il convient par ailleurs de ne pas oublier que plus de 90 % des réclamations sur chantier sont dues à un mauvais lavage après pose voire à un lavage non effectué. Un bon lavage après pose permet d’éliminer les résidus de pose (mortier, colle, peinture et saletés de chantier de différentes natures) de même que les éventuels résidus de saletés superficielles.

Entretien courant

Pour les sols à surface polie, il est recommandé d'effectuer le nettoyage quotidien à l'aide du détergent neutre Fila Cleaner (en veillant à respecter scrupuleusement les pourcentages de dilution recommandés sur le flacon) et d'effectuer à intervalles réguliers des traitements imprégnants antitaches afin de les protéger contre les éventuels dommages causés par des feutres, de l'encre, de la rouille ou d'autres produits hautement pénétrants. RATSCHLÄGE FÜR DAS VERLEGEN UND REINIGEN DES KERAMIKPRODUKTS VON CERAMICA RONDINE

Vorwort

Die Norm DIN EN 14411 – „Keramische Fliesen und Platten - Begriffe, Klassifizierung, Güteermale und Kennzeichnung“ – hat das Ziel, die Begriffe, Voraussetzungen und Kennzeichnungskriterien für keramische Fliesen erster Wahl festzulegen.

Italcer S.p.A. führt an seinen Fliesen ständig alle von der oben genannten Norm vorgesehenen Prüfungen durch, wobei die Dienste zugelassener Prüflabors in Anspruch genommen werden. Ferner werden durchgehend alle internen Prozeduren zur Qualitätssicherung des Produkts angewandt.

Verlegen

Der Fliesenleger muss auf der Baustelle vor dem Verlegen den Farbton, die Größe und die Wahl des Materials prüfen, während er das Material beim Verlegen immer abwechselnd mehreren Packungen entnehmen muss, um eine ideale Farbmischung zu erhalten. Der Fliesenleger muss ferner die Eignung des Produkts auch bezüglich eventueller bereits vor dem Verlegen sichtbarer Mängel prüfen, auf die nach dem Verlegen keine Garantie mehr geleistet wird.

Der Fliesenleger muss einen für die verschiedenen Bestimmungszwecke geeigneten Kleber verwenden und die auf den Packungen angegebenen Gebrauchsanweisungen des jeweiligen Herstellers beachten. Er muss sorgfältig kontrollieren, dass der Untergrund stabil, trocken und verlegereif, nicht gefroren und nicht zu warm ist. Der Kleber ist kunstgerecht zu verteilen, damit sich keine Hohlräume zwischen Fliese und Untergrund bilden.

Der Fliesenleger muss insbesondere bei Produkten mit polierter, satinierter oder geläppter Oberfläche darauf achten, das Material auf der nach oben weisenden Seite nicht mit einem Bleistift (Graphit) oder unutilisierter Tinte zu kennzeichnen. Bei der Realisierung der von der Bauleitung geforderten Zuschnitte und Formen sind spezielle Diamantscheiben und spezifische Werkzeuge zu verwenden. Das gilt insbesondere für emailliertes Steinzeug.

Die Größe der Fugen zwischen den einzelnen Fliesen kann je nach verwendetem Format, Verlegewinkel (orthogonal oder diagonal) und Bestimmungszweck variieren. Für nicht rechtwinklig geschliffene Produkte wird eine Mindestfuge von 3 mm, für rechtwinklig geschliffene Produkte von 2 mm empfohlen.

Die fortlaufende Verlegung rechteckiger Formate erfordert das Versetzen der Fliese um 6 cm, aber auf keinen Fall um mehr als 10 cm. (Abb.1).

In großen Räumlichkeiten müssen in regelmäßigem Abstand Dehnungsfugen vorgesehen werden, während in kleinen Räumen ein kleiner Freiraum zwischen Fliesen und Wänden ausreicht, der dann durch die Fußleiste abgedeckt wird.

Ausfugen und Reinigen nach dem Verlegen

Vor dem Gebrauch von mit Pigmenten gefärbten Mörteln oder Füllstoffen sollte eine entsprechende Probe durchgeführt werden.

Für polierte, satinierte oder geläppte Oberflächen emaillierten Steinzeugs können aufgrund der durch die Schleifwirkung der Schleifscheiben während des Bearbeitungsprozesses verursachten Mikroporosität keine kontrastgefärbten Mörtel oder Füllstoffe verwendet werden (weiße Fliesen und Ausfugmaterial in Anthrazit, Rot usw.).

Beim Gebrauch von Zementmörteln nach dem Ausfugen der Fliesen ist es bei noch frischem Mörtel erforderlich, den überschüssigen Mörtel umgehend mit einem Schwamm und reichlich Wasser zu entfernen. Einige Tage nach dem Verlegen wird eine gründliche Reinigung mit gepufferten Säuren durchgeführt, um alle Rückstände zu lösen und vollständig zu entfernen.

Ebenso wichtig ist ein gründliches Nachspülen, bis das Reinigungswasser klar ist. Nützlich ist die Anwendung von Flüssigkeitsabsaugern, um das schmutzige Reinigungswasser zu entfernen, ohne es über die Fliesen zu schieben.

Auch nach Abschluss aller Bauarbeiten muss der Fliesenleger die Böden mit einer Lösung aus Wasser und gepufferter Säure waschen, um zu verhindern, dass ein unsachgemäßes oder zu spätes Entfernen der Rückstände des für die Fugen verwendeten Mörtels schwer zu entfernende Schleier hinterlässt.

Für diese Reinigungsarbeiten empfiehlt Rondine das Produkt Deterdek von FILA (den vom Hersteller auf der Flasche angegebenen Verdünnungsgrad strikt beachten), einen sauren Kraftreiniger, der keine schädlichen Dämpfe bildet und gleichzeitig auch eine sehr gute Reinigungswirkung besitzt. Für besondere Anwendungen, wenn zum Beispiel eine wasserundurchlässige Ausfugung gewünscht wird, kann ein Epoxidmörtel verwendet werden. Die Gebrauchsanweisung des Herstellers auf den Packungen genau befolgen. Für den Gebrauch solcher Produkte sollte man sich immer an Fliesenleger mit großer Berufserfahrung wenden, denn die falsche Aufbringung von Epoxidmörteln führt zu einer irreparablen Beeinträchtigung der Ästhetik und der Farbe der Fliesen.

Der Gebrauch von Reinigungsmitteln (des Typs Rostschutzmittel), die oft Fluorsäure enthalten, führt zu einer irreparablen Beschädigung der Oberfläche aller Fliesenarten. Ferner sollte man wissen, dass über 90% der Beanstandungen auf der Baustelle auf ein ungenügendes oder gar fehlendes Waschen nach den Verlegearbeiten zurückzuführen sind.

Durch das korrekte Waschen nach dem Verlegen werden Verlegungsrückstände (Mörtel, Kleber, Lack, Baustellenschmutz unterschiedlicher Art) eliminiert und eventuelle oberflächliche Schmutzablagerungen entfernt.

Instandhaltung und Pflege

Für Böden mit polierter Oberfläche empfehlen wir eine tägliche Reinigung mit dem neutralen Reiniger Fila Cleaner (den auf der Flasche angegebenen Verdünnungsgrad strikt beachten) und eine regelmäßige Behandlung mit Imprägniermitteln zum Schutz gegen Flecken und Verunreinigungen durch Stifte, Tinte, Rost oder anderen Stoffen mit hohem Penetrationsvermögen. Für die Instandhaltung und Pflege unserer Fliesen empfehlen wir die Produkte von FILA. Diese Produkte finden Sie auf der Internetseite www.filachim.com.
